

Pakhi Shukla

Navi Mumbai, Maharashtra, India | +919967736451 | pakhishukla308@gmail.com | linkedin.com/in/pakhi-shukla-6773a428b/

Professional Summary

- Computer Science undergraduate with hands-on experience in machine learning, Java development, web technologies (Flask, HTML/CSS), and data structures. Proficient in building scalable applications using Java, Python, and AI APIs. Seeking a software engineering/internship role to contribute to innovative tech solutions.

Education

- B.Tech in Computer Science (Core)**, VIT Bhopal University, Madhya Pradesh, India
- Achieved **CGPA 8.88/10** (till Semester 6), **Semester 5 GPA: 9.17/10**, Expected Graduation: July
- 2027 **Class 12th (CBSE)**, DAV Public School, New Panvel, India | Earned **84.4%**, Completed:
- 2023 **Class 10th (CBSE)**, DAV Public School, New Panvel, India | Earned **91.4%**, Completed: 2021

Technical Skills

- Languages:** Java, Python, SQL
- Data Structures & Algorithms:** Proficient in fundamental DS&A concepts for problem-solving.
- Frameworks & Libraries:** TensorFlow, Flask, NumPy, Pandas, OpenCV
- Cloud Services:** Amazon Web Service (EC2, Elastic Beanstalk, S3, Lambda)
- Tools & Platforms:** Git, GitHub, IntelliJ IDEA, VS Code, LaTeX

Projects

1. Pneumonia Detection Using Chest X-Rays | Machine Learning (Group Project) | Sept 2024 – Dec 2024

- Developed a CNN model using TensorFlow and OpenCV on 5,000+ chest X-ray images, achieving 92% accuracy in pneumonia classification.
- Improved model F1-score by 8% using data augmentation techniques (rotation, scaling, normalization) and CNN layer optimization. Deployed the solution in a Python environment using NumPy and Pandas for preprocessing and real-time result visualization.
- Technologies:** Python, TensorFlow, CNN, OpenCV, NumPy, Pandas

2. LegalEase – AI-Powered Legal Assistance Platform | Blockchain, Machine Learning (Group Project) | Jan 2025 – Apr 2025

- Built an NLP-driven chatbot handling 100+ legal queries/week with 85% accuracy, trained on Indian law datasets.
- Implemented blockchain-based notarization using Ethereum, securing 500+ documents and reducing data tampering by 15%.
- Developed a tamper-detection system achieving 90% precision on voice clips using FFT and machine learning classifiers.
- Technologies:** Python, React.js, Flask, OpenAI GPT, Blockchain (Ethereum)

3. OptiLearn – AI-powered Study Optimization System | (Individual Project – In Progress)

- Developing a Java-based scheduler using the 0-1 Knapsack algorithm to optimize study plans across 5–8 syllabus modules.
- Targets up to 40% improvement in efficiency; tested on 50+ academic datasets simulating exam constraints (7–30 day windows, <4 hrs/day).
- Backend implemented in Java using IntelliJ and GitHub; frontend designed in HTML/CSS for downloadable daily schedules.
- Planned Technologies:** Java, 0-1 Knapsack (DSA), HTML/CSS, IntelliJ IDEA, GitHub, JUnit

Experience

PAT Volunteer – Cognizant Campus Drive | Volunteer Coordinator | Oct 2024

Volunteer Coordinator – Selected among top 16 out of 423 applicants to manage student flow during Cognizant placement drive. Enhanced candidate onboarding and coordination, reducing scheduling errors by 30%.

Certifications & Leadership

- Certifications:** Fundamentals of AI/ML (Dec 2023), Python Programming (Apr 2024); Java Programming (May 2025) and NPTEL Introduction to Machine Learning (May 2025).
- Leadership:** Event Team Member for the Cisco and OWASP clubs, organizing and coordinating 5+ technical and cybersecurity workshops for over 180 total participants.
- Workshops Attended:** **Git and GitHub, Live Hacking.**
